

Exception

Exception is an unexpected event that happens during the program execution (runtime) that disrupts the normal flow of instructions.

It's a way to handle errors & continue the program normally

Types

- 1) Checked Exception (~~Run~~ Compile-Time)
- 2) unchecked Exception (Run-Time)
- 3) Errors.

Syntax [try]-catch]

```

try {
    // code
} catch (ExceptionType e) {
    // code
}
  
```

finally block:

```

try {
    // code
} catch (Exception e) {
    // code
} finally {
    // code
}
  
```

multiple catch

```

try {
    // code
} catch (ExceptionType1 e) {
    // code
} catch (ExceptionType2 e) {
    // code
}
  
```

throw [syntax].

```

throw new ExceptionType("Error
    message");
  
```

[It's used to explicitly throw an exception from a method (or) block of code] → throw

throws [syntax].

used to declare that a method may throw one or more exceptions.

```

returnType methodName() throws
    ExceptionType
    {
        // code
    }
  
```

new:

- ↳ Creates an object
- ↳ throw throws the object

Exceptions are object in Java. & throw an exception.

throw → I'm throwing the exception.

throws → This method may throw an exception.
